

SLURPEE

Nutritionally Enhance Your Water

Supplement SLURPEE in Water Troughs, Individual Drench,
or As a Top Dress on Feed

- Contains a high concentration of all electrolytes and fat soluble vitamins
 - Stabilize hydration through increased consumption of water that contains elevated concentrations of electrolytes
 - Stressed cattle need additional fat soluble vitamins
- Increased rumen buffer capacity with alkalized water
 - Stressed animals can have inconsistent feed intake patterns that can cause increased rumen acidosis
 - SLURPEE provides additional Vitamin B12 and Cobalt to support rumen fermentation
- Easy to administer
 - Can add to water trough for slow release of nutrients throughout the day
 - Top-dress on feed of targeted groups of cattle
 - Add to water and drench
